ประกาศในราชกิจจานุเบกษา ฉบับประกาศและงานทั่วไป เล่ม 127 ตอนพิเศษ 28 ง  
วันที่ 2 มีนาคม พุทธศักราช 2553

มาตรฐานผลิตภัณฑ์อุตสาหกรรมข้อต่อสำหรับใช้ในงานรับส่งคลื่นความถี่วิทยุ เล่ม 16 ข้อต่อแกน ขนาดตัวนำรอบนอก 7 มิลลิเมตร ที่เชื่อมต่อแกนแบบขันเกลียว อิมพีแดนซ์ลักษณะ 50 โอห์ม (75 โอห์ม) (แบบ N) ได้ประกาศใช้ครั้งแรก โดยรับ IEC 169-16(1982)(Amendment1(1996)) Radio-frequency connectors-Part 16: R.F. coaxial connectors with inner diameter of outer conductor 7mm(0,276in) with screw coupling -Characteristic impedance 50Ω(75Ω) (type N) มาใช้ในระดับเหมือนกันทุกประการ(Identical) โดยใช้ IEC ฉบับภาษาอังกฤษเป็นหลัก โดยประกาศในราชกิจจานุเบกษา ฉบับประกาศทั่วไป เล่มที่ 116 ตอนพิเศษที่ 111 ง วันที่ 29 ธันวาคม พุทธศักราช 2542

เนื่องจาก IEC ได้แก้ไขปรับปรุงมาตรฐาน IEC 169-16(1982)(Amendment1(1996)) เป็น IEC 61169-16 (2006) จึงได้ยกเลิกมาตรฐานเดิมและกำหนดมาตรฐานใหม่โดยรับ IEC 61169-16 (2006-12) Radio Frequency connectors Part 16: Sectional specification-RF coaxial connectors with inner diameter of outer conductor 7 mm (0,276 in) with screw coupling- Characteristics impedance 50Ω(75Ω) (type N) มาใช้ในระดับเหมือนกันทุกประการโดยใช้มาตรฐาน IEC ฉบับภาษาอังกฤษเป็นหลัก

คณะกรรมการมาตรฐานผลิตภัณฑ์อุตสาหกรรมได้พิจารณามาตรฐานนี้แล้ว เห็นสมควรเสนอรัฐมนตรีประกาศตาม มาตรา 15 แห่งพระราชบัญญัติมาตรฐานผลิตภัณฑ์อุตสาหกรรม พ.ศ. 2511

## ประกาศกระทรวงอุตสาหกรรม

ฉบับที่ 4089 ( พ.ศ. 2552 )

ออกตามความในพระราชบัญญัติมาตรฐานผลิตภัณฑ์อุตสาหกรรม

พ.ศ. 2511

เรื่อง ยกเลิกและกำหนดมาตรฐานผลิตภัณฑ์อุตสาหกรรม

ข้อต่อสำหรับใช้ในงานรับส่งคลื่นความถี่วิทยุ

ที่เชื่อมต่อแบบชั้นเกลียว อิมพีแดนซ์ลักษณะ 50 โอห์ม (75 โอห์ม) (แบบ N)

โดยที่เป็นการสมควรปรับปรุงมาตรฐานผลิตภัณฑ์อุตสาหกรรม ข้อต่อสำหรับใช้ในงานรับส่งคลื่นความถี่วิทยุ เล่ม 16 ข้อต่อร่วมแกน ขนาดตัวนำรอบนอก 7 มิลลิเมตร ที่เชื่อมต่อแบบชั้นเกลียว อิมพีแดนซ์ลักษณะ 50 โอห์ม (75 โอห์ม) (แบบ N) มาตรฐานเลขที่ มอก.1627-2541

อาศัยอำนาจตามความในมาตรา 15 แห่งพระราชบัญญัติมาตรฐานผลิตภัณฑ์อุตสาหกรรม พ.ศ. 2511 รัฐมนตรีว่าการกระทรวงอุตสาหกรรมออกประกาศยกเลิกประกาศกระทรวงอุตสาหกรรม ฉบับที่ 2587 (พ.ศ.2542) ออกตามความในพระราชบัญญัติมาตรฐานผลิตภัณฑ์อุตสาหกรรม พ.ศ.2511 เรื่อง กำหนดมาตรฐานผลิตภัณฑ์อุตสาหกรรม ข้อต่อสำหรับใช้ในงานรับส่งคลื่นความถี่วิทยุ เล่ม 16 ข้อต่อร่วมแกน ขนาดตัวนำรอบนอก 7 มิลลิเมตร ที่เชื่อมต่อแบบชั้นเกลียว อิมพีแดนซ์ลักษณะ 50 โอห์ม (75 โอห์ม) (แบบ N) ลงวันที่ 22 ตุลาคม พ.ศ.2542 และออกประกาศกำหนดมาตรฐานผลิตภัณฑ์อุตสาหกรรม ข้อต่อสำหรับใช้ในงานรับส่งคลื่นความถี่วิทยุ เล่ม 16 ข้อต่อร่วมแกน ขนาดตัวนำรอบนอก 7 มิลลิเมตร ที่เชื่อมต่อแบบชั้นเกลียว อิมพีแดนซ์ลักษณะ 50 โอห์ม (75 โอห์ม) (แบบ N) มาตรฐานเลขที่ มอก.1627-2552 ขึ้นใหม่ ดังมีรายละเอียดต่อท้ายประกาศนี้

ทั้งนี้ให้มีผลตั้งแต่วันที่ถัดจากวันที่ประกาศในราชกิจจานุเบกษา เป็นต้นไป

ประกาศ ณ วันที่ 1 กันยายน พ.ศ. 2552

ชาญชัย ชัยรุ่งเรือง

รัฐมนตรีว่าการกระทรวงอุตสาหกรรม

# มาตรฐานผลิตภัณฑ์อุตสาหกรรม

## หัวต่อสำหรับใช้ในงานรับส่งคลื่นความถี่วิทยุ

### เล่ม 16 หัวต่อร่วมแกน ขนาดตัวนำรอบนอก 7 มิลลิเมตร ที่เชื่อมต่อแกน แบบขันเกลียว อิมพีแดนซ์ลักษณะ 50 โอห์ม (75 โอห์ม) (แบบ N)

มาตรฐานผลิตภัณฑ์อุตสาหกรรมนี้กำหนดขึ้นโดยรับ IEC 61169-16 (2006) Radio Frequency connectors Part 16: Sectional specification-RF coaxial connectors with inner diameter of outer conductor 7 mm (0,276 in) with screw coupling- Characteristics impedance 50Ω(75Ω) (type N) มาใช้ในระดับเหมือนกันทุกประการ (identical) โดยใช้ IEC ฉบับภาษาอังกฤษเป็นหลัก

มาตรฐาน IEC 61169 นี้เป็นหนึ่งในข้อกำหนดที่เป็นรายละเอียดที่ให้ข้อมูลและกฎสำหรับการเตรียมข้อกำหนดรายละเอียด สำหรับหัวต่อที่ใช้ในงานรับส่งความถี่วิทยุ สำหรับหัวต่อร่วมแกน แบบขันเกลียวและ ตัวรับที่เชื่อมกันแบบขันเกลียว สำหรับการใช้งานกับระดับกำลังไฟระดับต่ำและปานกลาง หัวต่อนี้ถูกเรียกโดยทั่วไปว่า หัวต่อแบบ N

ในมาตรฐานนี้รวมถึงหัวต่อแบบ N ที่มีค่าอิมพีแดนซ์ 50 โอห์ม จำนวน 3 รูปแบบ ซึ่งแต่ละแบบสามารถนำมาใช้งานร่วมกันกับสองแบบที่เหลือได้

สำหรับหัวต่อใช้งานทั่วไป (เกรด 2) ที่พัฒนามาจากข้อกำหนด MIL-C17B และ MIL-C39012 สามารถใช้งานกับสายเคเบิลส่งสัญญาณความถี่วิทยุ แบบ 60096 IEC 50-7 ที่ความถี่สูงสุดถึง 12 จิกะเฮิรตซ์ โดยประมาณ

หัวต่อสมรรถนะสูง (เกรด 1) เหมาะสมกับการงานที่ใช้คลื่นระดับไมโครเวฟ ถ้างานประเภทนั้นมีความจำเป็นต้องใช้งานที่มีค่าตัวประกอบการสะท้อน (reflection factor) ต่ำกว่าที่ใช้สำหรับคการใช้งานทั่วไป

หัวต่อนี้เหมาะสมกับอุปกรณ์ต่างๆที่ใช้กับคลื่นไมโครเวฟ ค่าความคลาดเคลื่อนของขนาดมิติผิวสัมผัสอยู่ระหว่างค่าความคลาดเคลื่อนของเกรด 0 และเกรด 2 และจะถูกเลือกให้ได้สมรรถนะตามที่ต้องการ หัวต่อเกรด 1 ที่เป็นไปตามข้อกำหนดนี้ อาจใช้กับความถี่สูงสุด 18 จิกะเฮิรตซ์

หัวต่อที่ใช้ในงานทดสอบมาตรฐาน (เกรด 0) มีผิวสัมผัส (interface) ที่ต้องควบคุมอย่างเข้มงวดเพื่อให้ได้ค่าอ้างอิงสำหรับการวัดค่าของหัวต่อประเภทต่างๆ ชุดประกอบสายเคเบิล, อุปกรณ์และบริภัณฑ์ที่มีผิวสัมผัสกับหัวต่อ เกรด 1 และ 2.

หัวต่อนี้ยังสามารถใช้เป็นหัวต่อคลื่นไมโครเวฟ ในกรณีที่ต้องการการเชื่อมต่อที่มีความแม่นยำสูง เพื่อใช้กับความถี่สูงสุดถึงระดับ 18 จิกะเฮิรตซ์

ขั้วต่อที่มีค่าอิมพีแดนซ์คุณลักษณะ 75 โอห์ม ถูกกำหนดแล้วในภาคผนวก A ถึงแม้ว่า การใช้งานของ ขั้วต่อ 75 โอห์ม แบบ N ถูกวิพากวิจารณ์อย่างมาก

การเชื่อมต่อแบบไขว้โดยไม่เจตนาขั้วต่อ 75 โอห์ม และ 50 โอห์ม สามารถสร้างความเสียหายกับ ขั้วต่อ 75 โอห์ม แต่จากการสังเกตผล การใช้งานอย่างต่อเนื่องของขั้วต่อ 75 โอห์ม ในรูปแบบต่างๆที่ไม่ต่างกันมากนัก ทำให้พบแนวทางการออกแบบที่เป็นมาตรฐาน โดยขั้วต่อ 75 โอห์ม ควรได้รับการชี้บ่งอย่างชัดเจน

ข้อกำหนดนี้ระบุถึงลักษณะสมบัติของสมรรถนะที่แนะนำ ซึ่งถูกพิจารณาเมื่อมีการเขียนข้อกำหนดรายละเอียด (DS) และครอบคลุมถึงตารางทดสอบ และข้อกำหนดสำหรับการตรวจสอบ

รายละเอียดให้เป็นไปตาม IEC 61169-16 (2006)

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### RADIO-FREQUENCY CONNECTORS –

#### **Part 16: Sectional specification – RF coaxial connectors with inner diameter of outer conductor 7 mm (0,276 in) with screw coupling – Characteristics impedance 50 $\Omega$ (75 $\Omega$ ) (type N)**

### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61169-16 has been prepared by subcommittee 46F: R.F. and microwave passive components, of IEC technical committee 46: Cables, wires, waveguides, R.F. connectors, R.F. and microwave passive components and accessories.

This part of IEC 61169 cancels and replaces IEC 60169-16 published in 1982 and Amendment 1 (1996). This edition constitutes a technical revision.

This edition included the following significant technical changes with respect to IEC 60169-16:

Clauses 7 and 8 have been totally re-written and Clause 9 has been removed. Clause 7 currently includes test schedules and Clause 8 gives indications to fill a Blank Detail Specification (BDS).

The text of this standard is based on the following documents:

FDIS	Report on voting
46F/54/FDIS	46F/59/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

The QC numbers that appear on the front cover of this publication are the specification numbers in the IEC Quality Assessment System for Electronic Components (IECQ).

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61169 series, under the general title *Radio frequency connectors*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

## RADIO-FREQUENCY CONNECTORS –

### **Part 16: Sectional specification – RF coaxial connectors with inner diameter of outer conductor 7 mm (0,276 in) with screw coupling – Characteristics impedance 50 $\Omega$ (75 $\Omega$ ) (type N)**

#### **1 Scope**

This part of IEC 61169, which is a Sectional Specification (SS), provides information and rules for the preparation of Detail Specifications (DS) for pin and socket R.F. coaxial connectors, with screw coupling mechanism, for low to medium power applications. The connector is commonly known as the "type N".

Three versions of the 50  $\Omega$  characteristic impedance type N connector are included, each version being mateable with each of the others.

The general purpose connector (grade 2) derived from the specifications MIL-C17B and MIL-C-39012 may preferably be used with R.F. cable 60096 IEC 50-7 up to about 12 GHz maximum frequency.

The high performance connector (grade 1) is particularly suitable for microwave applications when lower reflection factors than are offered by the general purpose connector are required. The connectors may also be suitable for microwave components. The tolerances of the interface dimensions lie between those for grade 0 and grade 2, and are chosen to give the performance required. Some grade 1 connectors conforming to this specification may be used up to 18 GHz maximum frequency.

The standard test connector (grade 0) has a closely controlled interface to provide a reference for the measurement of connectors, cable assemblies, components and equipment with the above two interfaces. It may also be used as a microwave connector in situations when the most precise interface for use up to 18 GHz maximum frequency is required.

A 75  $\Omega$  characteristic impedance connector is given in Annex A even though the use of 75  $\Omega$  type N connectors is strongly deprecated.

Accidental cross-coupling of 75  $\Omega$  with 50  $\Omega$  connectors can destructively damage the 75  $\Omega$  version, but in view of the extensive use of a number of marginally different 75  $\Omega$  versions, the interface now given provides common design guidance. 75  $\Omega$  connectors should be clearly identified.

This specification indicates the recommended performance characteristics to be considered when writing a DS and covers test schedules and inspection requirements.

#### **2 Normative references**

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60068-1:1988, *Environmental testing – Part 1: General and guidance*  
Amendment 1 (1992)

IEC 60096-2:1988, *Radio-frequency cables – Part 2: Relevant cable specifications*

IEC 61169-1:1992, *Radio-frequency connectors – Part 1: Generic specification – General requirements and measuring methods*

Amendment 1 (1996)

Amendment 2 (1997)

ISO 263:1973, *ISO inch screw threads – General plan and selection for screws, bolts and nuts – Diameter range 0.06 to 6 in*

### 3 IEC type designation

Connectors conforming to this specification shall be designated by:

- a) the reference to this specification: 61169-16 IEC;
- b) characteristic impedance 50  $\Omega$  (75  $\Omega$ );
- c) number of the grade :
  - grade 0 = standard test connector = G 0;
  - grade 1 = high performance connector = G 1;
  - grade 2 = general purpose connector
  - if grade 2 is required, no grade designation is necessary;
- d) a group of figures specifying the climatic category (see 7.2.5).

Example:

61169-16 IEC-50-G 0 denotes a standard test connector, type N, 50  $\Omega$ .

### 4 Interface dimensions

#### 4.1 Dimensions – General purpose connectors – Grade 2

##### 4.1.1 General

Inch dimensions are original dimensions.

NOTE The values for dimensions in millimetres derived from those in inches are not necessarily exact (according to ISO 3701<sup>1</sup>), but they should be considered as acceptable alternatives to the original values.

All undimensioned pictorial configurations are for reference purposes only.

---

<sup>1</sup> This document has been withdrawn.

#### 4.1.2 Connector with pin centre contact

<i>s</i>	5,33	–	0,210	–	
<i>w</i>	–	–	–	–	4, diam.
<i>x</i>	–	–	–	–	4, diam.
<i>y</i>	8,53	8,74	0,336	0,344	diam.
<i>z</i>	6,76	–	0,266	–	
<i>ad</i>	–	0,13	–	0,005	radius

NOTE 1 Mechanical and electrical reference plane.

NOTE 2 Nominal inner diameter of outer conductor 7,0 mm (0,275 6 in). Diameter of outer and centre contact to provide nominal (50 Ω) characteristic impedance to meet electrical performance requirements.

NOTE 3 Thread 5/8-24 UNEF-2A (according to ISO 263).

NOTE 4 If sealing is required, dimension *f* (Figure 1) should be arranged so that with the gasket chosen, adequate pressure is applied to the front face (dimensions *w* and *x*) of the socket connector (Figure 3) to ensure adequate sealing.

NOTE 5 Radius only to ensure satisfactory sealing, but if chamfer is used, it should not encroach into minimum material condition of the design using the radius.

NOTE 6 Centre contact design is optional. It should however, meet the gauging requirements of 5.1.2 and relevant reflection factor requirements of Clause 3 using grade 0 connector in accordance with Figure 7.

NOTE 7 Applies to length of thread and not undercut.

## 5 Mechanical gauges and standard test connectors

### 5.1 Mechanical gauges

#### 5.1.1 Connectors with pin centre contact

##### 5.1.1.1 Gauge for outer contact of pin connector

See Figure 5.

Figure 5a

Figure 5b

Figure 5 – Gauge rings for outer contact of pin connector

##### 5.1.1.2 Test sequence

For slotted outer contacts, a steel test ring (Figure 5a) with an inner diameter  $b$  of 8,027 mm (0,316 in) maximum shall be placed over the outer electrical contact of the connector.

Insertion force: 113 N maximum.

This is a sizing operation.

After this a steel test ring (Figure 5b) with an inner diameter  $b$  of 8,23 mm (0,324 in) shall be placed over the outer electrical contact. All contact fingers shall touch the diameter  $b$  in the region of the tip ends.

The minimum withdrawal force shall be 2 N.

Recommended mass of the gauge: 200 g.

The gauge shall be retained in a vertical downward position.

#### 5.1.2 Connectors with socket centre contact

##### 5.1.2.1 Gauge and test pins for socket centre contact

See Figure 6.

The pins shall be made of steel.

**Figure 6 – Gauge and test pins for socket centre contact (for notes and dimensions, see Table 3)**

NOTE Test pin No. 2 shall have a 0,4 μm (16 μin) finish on the cylindrical surface of length <i>pm</i> . It is recommended that this pin has a mass of 56 g.								

### 5.1.2.2 Test sequence

The test sequence consists of:

- Gauging: Insert pin No. 1 once.
- Insertion force: When inserting pin No. 1 once more: the insertion force shall be 9 N maximum.
- Retaining: Insert pin No. 2 once: the retention force shall be 0,56 N minimum.

## 5.2 Standard test connectors – Grade 0

### 5.2.1 General

In order to carry out the reflection factor measurement according to 9.2.1 of IEC 61169-1, the measuring equipment should be provided with standard test connectors.

NOTE The values for dimensions in millimeters derived from those in inches are not necessarily exact (according to ISO 370) but they are to be considered as acceptable alternatives to the original values.

### 5.2.2 Standard test connector with pin centre contact

Figure 7 – Standard test connector with pin centre contact  
(for notes and dimensions, see Table 4)

Figure 8 – Details of pin centre contact  
(for notes and dimensions, see Table 4)

**Table 4 – Dimensions for standard test connector with pin centre contact**

## 6 Overall dimensions

Under consideration.

## 7 Quality assessment procedures

### 7.1 General

The following subclauses provide recommended ratings, performance and test conditions to be considered when writing a Detail Specification (DS). They also provide an appropriate schedule of tests with minimum levels of conformance inspection. See Table 6.

### 7.2 Ratings and characteristics

#### 7.2.1 General

The R.F. connectors defined in this specification are designed for use with a variety of coaxial braided and semi-rigid cables and rigid lines.

The values indicated below are recommended for series N connectors and are given for the guidance of the writer of detail specifications.

**Table 5 – Dimensions for standard test connector with socket centre contact**

Reference	mm		inches		Note
	Min.	Max.	Min.	Max.	
<i>a</i>	6,99	7,01	0,275 1	0,276 1	2, diam.
<i>b</i>	8,05	8,1	0,317	0,319	diam.
<i>d</i>	3,04 nom.		0,120 nom.		2, diam.
<i>e</i>	5,18	5,26	0,204	0,207	
<i>f</i>	9,07	9,17	0,357	0,361	
<i>p</i>	1,651 nom.		0,065 0 nom.		6, diam.
<i>q</i>	0,13	0,20	0,005	0,008	3
<i>s</i>	9,7	–	0,380	–	
<i>t</i>	8,28	8,53	0,326	0,336	5
<i>u</i>	0	0,15	0	0,006	
<i>v</i>	3,05	3,08	0,120 2	0,121 2	6, diam.
<i>aa</i>	4,47	–	0,176	–	4
<i>ac</i>	0,38	0,89	0,015	0,035	
<i>ae</i>	1,80	1,91	0,071	0,075	
<i>af</i>	0,38	0,64	0,015	0,025	

Dimensions not indicated in this Table are to be found in Table 2.

NOTE 1 Mechanical and electrical reference plane.  
Surface roughness 0,8 µm (32 µin).

NOTE 2 Diameter of outer and centre contact chosen to achieve a ratio  

$$\frac{a}{d} = 2,302 \ 9$$
to provide characteristic impedance of 50,00 ± 0,15 Ω.

NOTE 3 Chamfer.

NOTE 4 Minimum distance to insulating bead.

NOTE 5 Four slots 0,38 mm to 0,43 mm (0,015 in to 0,017 in) wide; 90° ± 50'.

NOTE 6 Diameter *v* shall be within the indicated limits when pin gauge of datum diameter 1,651 mm (0,065 in) is inserted in slotted portion only.

## 6 Overall dimensions

Under consideration.

## 7 Quality assessment procedures

### 7.1 General

The following subclauses provide recommended ratings, performance and test conditions to be considered when writing a Detail Specification (DS). They also provide an appropriate schedule of tests with minimum levels of conformance inspection. See Table 6.

### 7.2 Ratings and characteristics

#### 7.2.1 General

The R.F. connectors defined in this specification are designed for use with a variety of coaxial braided and semi-rigid cables and rigid lines.

The values indicated below are recommended for series N connectors and are given for the guidance of the writer of detail specifications.

Certain tests are listed without recommended values being given. These tests will not usually be required. When these tests are required, appropriate values shall be entered in the DS at the discretion of the specification writer.

### 7.2.2 Grade 2 – General purpose connectors

This grade is preferably used with 7 mm braided coaxial cable 60096 IEC 50-7, but varieties are available for both larger and smaller cables and for semi-rigid cables. Connectors shall not introduce a reflection factor greater than 0,13 at frequencies up to 11 GHz, or approximately 80 % of the upper cutoff frequency of the cable, whichever is lower. The reflection factor shall be not more than 0,03 at 1 GHz.

### 7.2.3 Grade 1 – High performance connectors

Grade 1 connectors are intended particularly for use with semi-rigid cables and rigid lines, but may also be used with braided cables and microwave components. They will exhibit reflection factors less than the reflection factor of grade 2 connectors of the same configuration (pattern). The reflection factor and frequency range, which may be up to 18 GHz, shall be agreed between purchaser and manufacturer. The best achievable limit for the reflection factor is deemed to be defined by the equation  $r_{\max} = 0,005 + 0,003 \times f$ , where  $f$  is the frequency in gigahertz.

### 7.2.4 Grade 0 – Standard test connector

This grade is preferably used with 7 mm rigid lines such as are recommended in the IEC 60457 series. It may also be possible, on rigid lines and other test equipment, to exchange connectors of this grade for connectors recommended in IEC 60457-2.

The maximum reflection factor of a connector at frequencies up to 18 GHz shall be not greater than  $0,0015 + 0,001 \times f$ , where  $f$ , is the frequency in gigahertz.

### 7.2.5 Climatic categories (see IEC 60068-1)

Under consideration.

**Table 6 – Ratings and characteristics**

Ratings and characteristics	IEC 61169-1 Subclause	Value	Remarks including any deviations from standard test methods

	Test method IEC 61169-1 subclause	Assessment level M (higher)				Assessment level H (lower)			
		Test required	Number of specimens	Permitted failures per group	Period	Test required	Number of specimens	Permitted failures per group	Period
Group D7 (d) Resistance to solvents and contaminating fluids	9.7	ia	1§		3 years	ia	1§		3 years
Details of symbols, abbreviations and procedures: a = suggested as applicable. ia = test suggested (if technically applicable). na = not applicable. IL = Inspection Level. AQL = Acceptable Quality Level. * = one set of piece-parts each style and variant, unless using common piece parts. # = for Qualification Approval (QA) a total of two failures only permitted for level H and 1 failure only for level M from groups D1 to D7. § = Group D7 – number of pairs for each solvent. (d) = destructive tests – specimens shall not be returned to stock.									

## 7.4 Procedures

### 7.4.1 Quality conformance inspection

This shall consist of test groups A1 and B1 on a lot-by-lot basis.

### 7.4.2 Qualification approval and its maintenance

This shall consist of three consecutive lots passing test groups A1 and B1 followed by selection of specimens from the lots as appropriate. These specimens shall successfully pass the specified periodic D tests.

## 8 Instructions for preparation of detail specifications

### 8.1 General

Detail Specifications (DS) writers shall use the appropriate Blank Detail Specification (BDS) pro-forma. The following pages comprise the pro-forma BDS dedicated for use with type N connectors. As such, it will already have entered on it information relating to

- the basic specification number applicable to all the detail specifications covering connector styles of the type covered by the sectional specification;
- the connector series designation.

The specification writer should enter the details relating to the connector style/variant(s) to be covered as indicated. The numbers in brackets on the BDS pro-forma correspond to the following indications which shall be given.

### 8.2 Identification of the Detail specification

- The name of the National Standards Organization (NSO) under whose authority the DS is published and, if applicable, the organization from whom the DS is available.
- The relevant mark of conformity and the number allotted to the DS by the relevant national or international organization authorizing the DS.

- (3) The number and issue number of the IEC/IECQ generic or sectional specification as relevant; also national reference if different.
- (4) If different from the IEC/IECQ number, any national number of the DS, date of issue and any further information required by the national system, together with any amendment numbers.

### 8.3 Identification of the component

- (5) Enter the following details:  
Style: the style designation of the connector including type of fixing and sealing, if applicable.  
Attachment: by deletion of the inapplicable options of cable/wire: given for centre and outer conductors.  
Special features and markings: as applicable.
- (6) Enter details of assessment level and the climatic category.
- (7) A reproduction of the outline drawing and details of the panel piercing, if applicable. It shall provide the maximum envelope dimensions, also the position of the reference plane and, in the case of a fixed connector, the position of the mounting plane(s) relative to the front face of the connector.  
Any maximum panel thickness limitations for fixed connectors shall be stated.
- (8) Particulars of all variants covered by the DS. As appropriate, the information shall include:
  - cable types (or sizes) applicable to each variant;
  - alternative plated or protective finishes;
  - details of alternative mounting flanges having either tapped or plain mounting holes;
  - details of alternative solder spills or solder buckets including, when applicable, those for use with Microwave Integrated Circuit (MIC) components.

### 8.4 Performance

- (9) Performance data listing the most important characteristics of the connector taking into account the recommended values of 7.2 in this specification. Deviations from the minimum requirements shall be clearly indicated. Non-applicable parameters shall be marked 'na'.

### 8.5 Marking, ordering information and related matters

- (10) Insert marking and ordering information as appropriate, together with details of related documents and any invoked structural similarity.

### 8.6 Selection of tests, test conditions and severities

- (11) 'na' shall be used to indicate non-applicable tests. All tests marked 'a' by the detail specification writer shall be mandatory.

When using the normal procedure with a dedicated BDS, the letter 'a' – for applicable – shall be entered in the 'Test required' column against each of the tests indicated as being mandatory in the test schedule as in 7.3 of this specification. Any additional tests required at the discretion of the specification writer shall also be indicated by an 'a'.

The specification writer shall also indicate, when necessary, details of deviations from the standard test methods and test conditions, including any relevant deviations given in the test schedule of the sectional specification.

The qualification approval and conformance inspection shall be such that the National Supervising Inspectorate (NSI) shall be satisfied that they are appropriate and in line with those for other connectors within the system providing a reasonably comparable service.

NOTE Relevant information on a basic style should be entered as variant 01.

Annex A  
 (informative)

Guidance information for interface dimensions of 75 Ω characteristic impedance general purpose connectors

With the exception of the inner contacts, the interface dimensions of the 75 Ω connector have been traditionally identical to that of the 50 Ω connector. It has thus been possible unintentionally to cross-couple connectors with the following effects.

- i) 75 Ω pin – 50 Ω socket: open circuit inner contact.
- ii) 50 Ω pin – 75 Ω socket: mechanical destruction of 75 Ω inner socket contact.

Consequently, the use of the 75 Ω type N connector is very strongly deprecated; it should only be used for replacement, and never in new applications.

In view of this destructive mateability, a clear visual distinction should be made on the outside of the connector with a coloured (preferably yellow) or black band and legend "75 Ω" or "75 ohms".

The reflection factor shall be not more than 0,03 GHz at 1 GHz.

Dimensions for the connector with pin centre contact are as given in Table 1, except for the following reference and notes:

Figure A.1 – Details of pin centre contact

Table A.1 – Dimensions for the pin centre contact

Reference	mm		inches		Note	Figure
	Min.	Max.	Min.	Max.		
<i>d</i>	2,01 nom.		0,079 nom.		2	A.1
<i>p</i>	0,84	0,91	0,033	0,036	diam.	A.1
<i>ab</i>		0,25	–	0,010	7, radius	A.1
NOTE 2 Diameter of outer and centre contact to provide nominal (75 Ω) characteristic impedance to meet electrical performance requirements.						
NOTE 7 Flat 0,13 mm (0,005 in) diameter allowed.						

Dimensions for the connector with socket centre contact are as given in Table 2, except for the following reference and notes:

**Table A.2 – Dimensions for the connector with socket centre contact**

Reference	mm		inches		Note	Figure
	Min.	Max.	Min.	Max.		
$d$	2,01 nom.		0,079 nom.		2, diam.	4
$p$	–	–	–	–	6, diam.	4
<p>NOTE 2 Diameter of outer and centre contact to provide nominal (75 <math>\Omega</math>) characteristic impedance to meet electrical performance requirements.</p> <p>NOTE 6 Centre contact design is optional. A gauge with a pin according to Figure 6, with a diameter <math>p</math> of <math>0,93^{+0,005}_{-0}</math> mm (<math>0,036^{+0,0002}_{-0}</math> in) should be inserted into the centre contact three times; the insertion force measured at the third insertion should at maximum be 9 N. The force subsequently required to withdraw a second pin according to Figure 6 with a diameter <math>p</math> of <math>0,84^{+0}_{-0,005}</math> mm (<math>0,033^{+0}_{-0,0002}</math> in) should be 0,56 N minimum in a vertical downward position.</p>
